Mosquito Prevention Check List

PEST SOLUTIONS

As a General Rule, any item, even an item as small as a bottle cap or slop in the soil in the yard that can hold water for three days will allow mosquitoes to breed in your yard. There are even certain Mosquitoes that can breed in overly damp soil. The best thing you can do to protect you and your family from getting bitten by mosquitoes is preventing breeding sites around your property, or hire a professional pest control company to implement a cost effective program which includes identification of breeding sites and treatments.

Basic Check List

	OK	Items I need to fix.
Water heater is not leaking.
